

# CH-30 *Visual Station*

## Next-generation Food Inspection

**Pizza**

**Tortillas**

**Flat Breads**

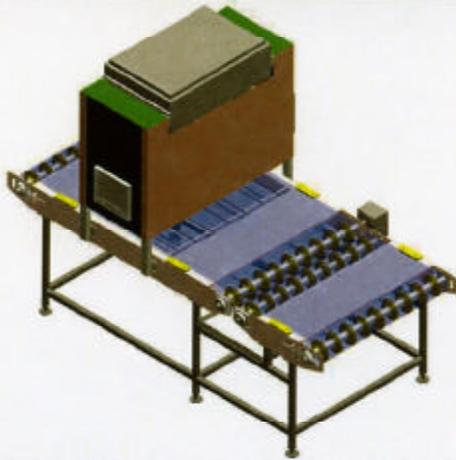

**Specialty Foods**

The most efficient auto detection machine for **color**, *shape*, size, holes or dark spots, in the tortilla and pizza industries. We use the latest technology powered by

**SHARP** Vision Group

# 'Focusing on Your Product Quality and Manufacturing Efficiency'

The Visual station can detect presence, absence, position, orientation, or number of objects. It can locate positioning marks, and their deviation from a reference position. The vision station can measure the distance and angle between two points and can determine the x, y and angular deviation of two points from their reference positions.

## THE VISION INSPECTION SYSTEM CAN VISUALLY INSPECT:

- ◆ Size
  - ◆ Shape
  - ◆ Pin holes
  - ◆ Toast points to your specifications
  - ◆ Overlaps
  - ◆ Orientation
- **Sorts unlimited lanes for your products**

## CHARACTERISTICS

- ◆ Stainless steel construction, frame and housing. Dark plastic belting
- ◆ Accommodates two to eight rows of corn or flour tortillas, or pizza
- ◆ One digital camera per lane captures the image of the incoming product and sends a signal to reject any product out of your specifications
- ◆ Easy to use software interface
- ◆ No complicated programming
- ◆ Easy to change parameters
- ◆ Includes: conveyors, air knock-off system, cameras, controller, and optional displays.

## Touch Screen Interface/Touch Pen

- Built in PLC function
- Nema4 enclosure light source
- Easy wash down and cleaning procedures
- Easy programming
- Pick and place your applications for quality inspections
